

GN 1000 RHL

- More flexibility for your communications

Pick up and hang up without going back to your desk

Enjoy full wireless freedom!

Add the GN 1000 Remote Handset Lifter to your GN Netcom wireless headset system, and you're completely free to roam in the office. With the GN 1000, you can answer calls, and end them, from wherever your wireless headset takes you.

Two minutes to lift-off.

Unlike some handset lifters, the GN 1000 is easy to install and with only a few simple steps it's ready to go.

One-button operation.

The GN 1000 is easy to use, too. When you hear the ring tone, you push a button. The GN 1000 immediately lifts the handset

and connects the call. At the end of your call, just push the button again to hang up.

Technology you can trust.

Most handset lifters respond to sounds within a certain frequency range. If they're not perfectly adjusted, you can miss calls or be signalled when there isn't a call. The GN 1000 senses the magnetic field the speaker generates when your phone rings, which means you'll never miss a call.

No compatibility or reliability worries.

The GN 1000's design is based on a comprehensive study of telephone measurement specifications, so it works with virtually all business telephones. And, the GN 1000 has been tested to lift and lower 100,000 times to assure continuing reliability.

Answers and ends calls remotely by lifting and lowering handset	•
Eliminates telephone compatibility questions by working with most standard telephones	•
Provides reliable operation thanks to its magnetic sensor technology	•
Is easy to install	•
Never misses a call	•
Sets up quickly and easily	•
Lets others know when you're on a call with its on-line indicator	•
Doesn't add to desktop clutter thanks to its near-zero footprint	•
