Soundshield 3G

Long periods of exposure to loud noise can affect the hearing of a telephone headset wearer. Soundshield 3G technology ensures headset wearers are exposed to a consistently safe level of volume, actively adjusting sound levels to meet the strictest workplace daily noise exposure guidelines.

Soundshield is world renowned as the safest solution for headset users.

New Generation Soundshield 3G

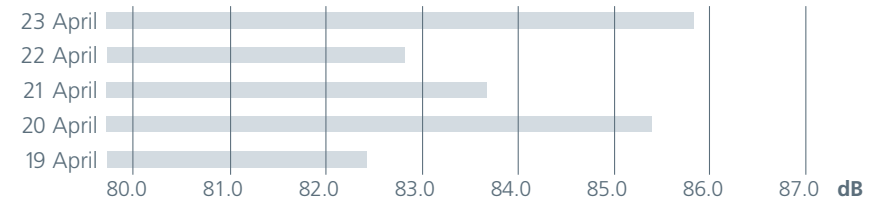

Soundshield 7100 – Innovative, stylish, and technologically advanced. With unique, patented shriek rejection software and Digital Signal Processing. Up to 2 simultaneous acoustic shrieks, detected and completely removed within 16 to 32 milliseconds. Surrounding sounds will not affect the speech quality of the call. The Ultimate in Acoustic Shock protection.

Soundshield 7125 – with Audio Streaming for VoIP and Softphone use
Soundshield 7130 – with Audio Switcher between PC and telephone handset
Soundstat (ST) – software option to record user's exposure to sound

Soundstat

Soundstat noise dosimetry software, available optionally with Soundshield 3G, captures and stores a user's exposure to sound. This important information may then be exported to a computer locally or remotely for simple & easy visualisation and review by Contact Centre & Workplace safety managers.

Average Daily Exposure Level
